The Future of CCTV ?

The future of CCTV over IP is even clearer thanks to the high definition video streaming capabilities of today's HD CCTV cameras.

The IP CCTV market is growing ever faster than before and this is mainly due to this new technology that demands an IP infrastructure for it to operate effectively.

This presentation will discuss the benefits of this technology and why now is the time for the network industry to be involved in IP CCTV.

What is CCTV?

“CCTV (closed circuit television) is a television system in which signals are not publicly distributed; cameras are connected to television monitors in a limited area such as a store, an office building, or on a college campus. CCTV is commonly used in surveillance systems”
